1 ER Diagram

The basic Idea was to implement multiple player game. where one player can play multiple games and one game can be played by multiple players. This project was not much data-centered so it does not have any complex database. The following image is generated by the sql auto-generated image which shows the relationship among relational database.

2 Technologies

1. **Front End:** JavaScript, HTML, CSS
2. **Back End Framework:** Servlet for jsp and Tomcat server
3. **Database SQL:** mysql
