AI TERM PROJECT PROPOSAL

EmergencyExpert

Group Members:

Dur e Sameen 19L-1156

Abdul Rehman 19L-1135

Sameen Imran 19L-2231

Mahnoor Pervaiz 19L-2340

Tasks:

1- Break down the problem and decision on the best coding language most suitable for your project.
2- Analysis of the AI concepts that will be implemented in the Project
3- Gathering of Sample Data for the testing of the Project after implementation.

Team Performance:

We sat together and analyzed the problem, and decided that python, c++ will be the languages that will be used.

The AI concepts of RTA*, LRTA* and genetic algorithms will be used for finding the optimal paths between the user's location and his desired hospital.

For the suggestion of the most available hospital and hospital data analysis, the neural networking concepts will be used.

Test data is being collected.

_____

That's All, Folks (^_^).
